Our team will create an online story map tour of the National Park of American Samoa (http://www.nps.gov/npsa/index.htm). American Samoa is currently experiencing an outbreak of dengue fever, which could have an impact on tourism and in-person visits to this unique site. A virtual tour may be the only way many people will ever get to experience it. The physiography of the park will be captured with high resolution remote sensing imagery and terrain data. In addition, the unique HomeStay program, where visitors can become acquainted with Samoan people and culture in a village setting, will be brought to life in the story map.
