TM image subsets of Iowa (upper) and Georgia (lower), and the corresponding U.S. Geological Survey 1:24,000 quadrangle segments illustrate the possibilities for defining the location of high contrast road intersections to a fraction of a pixel, whereas natural points such as the tip of the small peninsula are more difficult to identify (see article by Welch, Jordan and Ehlers).

Second-class postage paid at Falls Church, Virginia and at additional mailing offices.

Photogrammetric Engineering and Remote Sensing (ISSN 0099-1112) is published monthly by the American Society for Photogrammetry and Remote Sensing, 210 Little Falls Street, Falls Church, Virginia 22046. Publication Office—The Sheridan Press, Hanover, Pa. 17331. (Also see Notice on second following page.)

Photogrammetric Engineering & Remote Sensing

JOURNAL OF THE
AMERICAN SOCIETY FOR PHOTOGRAFMETRY AND REMOTE SENSING

Volume LI September 1985 Number 9

Foreword, Special LIDQA Issue
Brian L. Markham and John L. Barker ......1245
Guest Editors ..........................................................1247
Comparative Evaluations of the Geodetic Accuracy and Cartographic Potential of Landsat-4 and Landsat-5 Thematic Mapper Image Data
Exceptional geometric fidelity is a characteristic of Landsat TM data.
R. Welch, T. R. Jordan, and M. Ehlers ......1249
Landsat-4 and Landsat-5 MSS Coherent Noise:
Characterization and Removal
Low-level coherent noise in Landsat MSS data can be effectively removed by filtering after acquisition; filters installed on the Landsat-5 MSS prior to launch reduced the noise sufficiently to eliminate additional filtering.
James C. Tilton, Brian L. Markham, and William L. Alford ..........1263
Interpretation of Landsat-4 Thematic Mapper and Multispectral Scanner Data for Forest Surveys
Color composites containing Thematic Mapper Bands 3, 4, and 5 are best for discriminating forest types.
Andrew S. Benson and Stephen D. DeGloria ..........1281
Investigation of Landsat-4 Thematic Mapper Line-to-Line and Band-to-Band Registration and Relative Detector Calibration
Various A-type and P-type images (France, USA) are analyzed in order to test Landsat-4 Thematic Mapper geometric accuracy, detector-to-detector relative calibration and within-line target saturation.
Jacky Desachy, Gerard Begni, Benoit Boissin, and Jacqueline Perbos ..........1291
Thematic Mapper: Operational Activities and Sensor Performance at ESA/Earthnet
Thematic Mapper data acquired and processed in Europe are characterized in respect to NASA/NOAA performance specifications.
L. Fusco, U. Frei, and A. Hsu ..........1299

MEMBERSHIP RATES: Membership in the American Society for Photogrammetry and Remote Sensing is open to any person actively engaged in the practice of Photogrammetry, Photointerpretation, and Remote Sensing, or who by means of education or profession is interested in the application or development of these arts and sciences. The annual dues for Regular members are $40.00 which includes a $20.00 member subscription to the Society's official journal, Photogrammetric Engineering and Remote Sensing. The annual dues for accredited student members are $15.00 which includes an $8.00 student subscription to the official journal. (All memberships are on a calendar year basis.) Add $5 for all international memberships to cover cost of postage. Postmaster: send address changes to the American Society for Photogrammetry and Remote Sensing, 210 Little Falls Street, Falls Church, Virginia 22046.

SUBSCRIPTION RATES: Persons or organizations that are not affiliated with the Society may obtain non-member subscriptions to Photogrammetric Engineering and Remote Sensing in accordance with the following schedule:

Non-member subscription . . . . $65.00 per year (calendar)
Add $5 for international subscriptions.

Printed in the United States of America.

Permission to Photocopy
The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee of $2.25 through the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.

Characterization and Comparison of Landsat-4 and Landsat-5 Thematic Mapper Data
Engineering analyses of Thematic Mapper image data from Landsats 4 and 5 were performed with an emphasis on radiometric performance.

Michael D. Metzler and William A. Malila ........1315

Intraband Radiometric Performance of the Landsat Thematic Mappers
Detailed characteristics of the Thematic Mapper were determined using only natural scene detail; correction procedures are described.

Hugh H. Kieffer, Debra A. Cook, Eric M. Eliason, and Patricia T. Eliason .............1331

Thematic Mapper Thermal Infrared Calibration
Landsat thermal infrared data is evaluated through comparison with underflight and ground truth data.

John R. Schott and William J. Volchok ......1351

Assessment of Radiometric Accuracy of Landsat-4 and Landsat-5 Thematic Mapper Data Products from Canadian Production Systems
Thematic Mapper data from Landsat-4 and Landsat-5 processed by the Canadian production system are analyzed for variability within-scenes and between-sensors; comparisons are also made to U.S. processed data.

Jennifer M. Murphy, Francis J. Ahern, Paul F. Duff, and Anthony J. Fitzgerald ........1359

Methods for Destriping Landsat Thematic Mapper Images—A Feasibility Study for an Online Destriping Process in the Thematic Mapper Image Processing System (TIPS)
The level of Thematic Mapper detector-to-detector striping does not warrant online processing given the required 60 percent increase in computer time.

Demetrios J. Poros and Chris J. Peterson ..........1371

Thematic Mapper Radiometric Correction Research and Development Results and Performance
Results of the research and development period for Thematic Mapper radiometric correction and performance benchmark for relative radiometric correction.

Amrendra Singh ..............................1379
